

ARTIFACTS FROM THE FUTURE

2033 MAINSTREAM EDTECH

In this section, you can explore four different imaginary educational technologies that could exist in the future and, by 2033, could be as mainstream as the LMS is today. On the left below you will find some prompt questions, which briefly introduce each artifact. Use those questions to choose which artifacts you are interested in exploring. Then, click the button on the right to go to the artifacts. Each artifact will include two pages for you to explore: the first page includes an introduction to the artifact and a link to explore the artifact; the second page provides a more in-depth explanation of the artifact design, the research that inspired it, and a space for you to capture your thoughts about the artifact.

ARTIFACT A:
EXCELERATOR COURSE CREATOR

Do you want to look into an artificial intelligence (AI) and blockchain based software that would create highly customized curriculums, complete with syllabi, assignments, readings, videos, and interactive elements?

 EXCELERATOR
COURSE CREATOR

ARTIFACT B:
CANADIAN LEARNING CREDIT SYSTEM

Are you curious about a platform that would allow Canadians to recognize skills learned from informal sources and work experiences, accelerate their academic programs, and make it easier for employers to identify highly skilled individuals?

 CLCS
Canadian Learning
Credit System

ARTIFACT C:
EDUWELL

Can you imagine what system future educators would need to make learning experiences responsive to learners' holistic wellness in real time?

 EduWell

ARTIFACT D:
CAREER COMPASS

What if there was app designed to work as your digital co-pilot to show you what unique opportunities are available to you and provide you with a customized journey that matches your interests?

 CAREER COMPASS
